Material property data for engineering materials

Mike Ashby

Department of Engineering, University of Cambridge

5th edition, October 2021

Physical constants in SI units

Physical constant	Value in SI units	
Absolute zero temperature	-273.2	ºC
Acceleration due to gravity, g	9.807	m/s^2
Avogadro's number, NA	6.022×10^{23}	-
Base of natural logarithms, e	2.718	-
Boltzmann's constant, k	1.381×10^{-23}	J/K
Faraday's constant k	9.648×10^4	C/mol
Gas constant,	8.314	J/mol-K
Permeability of vacuum, μ_o	1.257×10^{-6}	H/m
Permittivity of vacuum, ε_o	8.854×10^{-12}	F/m
Planck's constant, h	6.626×10^{-34}	J/s
Velocity of light in vacuum, c	2.998×10^8	m/s
Volume of perfect gas at STP	22.41×10^{-3}	m^3/mol

Conversion of units, general

Quantity	Imperial Unit	SI Unit
Angle, θ	1 rad	57.30º
Density, ρ	1 lb/ft3	16.03 kg/m^3
Diffusion coefficient, D	1cm^3/s	1.0×10^{-4}m^2/s
Energy, U	See inside back cover	
Force, F	1 kgf 1 lbf 1 dyne	9.807 N 4.448 N 1.0×10^{-5}N
Length, l	1 ft 1 inch 1 Å	304.8 mm 25.40 mm 0.1 nm
Mass, M	1 tonne 1 short ton 1 long ton 1 lb mass	1000 kg 908 kg 1107 kg 0.454 kg
Power, P	See inside back cover	
Stress, σ	See inside back cover	
Specific heat, C_p	1 cal/gal.ºC Btu/ºF	4.188 kJ/kg.ºC 4.187 kg/kg.ºC
Stress intensity, K_{1c}	1 ksi $\sqrt{in}$	1.10 MN/m$^{3/2}$
Surface energy γ	1 erg/cm^2	1 mJ/m^2
Temperature, T	1ºF	0.556 K
Thermal conductivity λ	1 cal/s.cm.ºC 1 Btu/h.ft.ºF	418.8 W/m.ºC 1.731 W/m.ºC
Volume, V	1 Imperial gall 1 US gall	4.546×10^{-3}m^3 3.785×10^{-3}m^3
Viscosity, η	1 poise 1 lb ft.s	0.1 N.s/m^2 0.1517 N.s/m2

Table of Contents

Data for engineering materials

This booklet lists the names and typical applications common engineering materials, together with data for their properties.

Ansys / GRANTA EDUPACK

Table A1. Material names and applications

Polymers		Applications
Elastomers		
Butyl Rubber		Tires, seals, anti-vibration mountings, electrical insulation, tubing
Ethylene-vinyl-acetate	EVA	Bags, films, packaging, gloves, insulation, running shoes
Isoprene	IR	Tyres, inner tubes, insulation, tubing, shoes
Natural Rubber	NR	Gloves, tyres, electrical insulation, tubing
Polychloroprene (Neoprene)	CR	Wetsuits, O-rings and seals, footwear
Polyurethane Elastomers	el-PU	Packaging, hoses, adhesives, fabric coating
Silicone Elastomers		Electrical insulation, electronic encapsulation, medical implants
Thermoplastics		
Acrylonitrile butadiene styrene	ABS	Communication appliances, automotive interiors, luggage, toys, boats
Cellulose Polymers	CA	Tool and cutlery handles, decorative trim, pens
Ionomer	I	Packaging, golf balls, blister packs, bottles
Polyamides (Nylons)	PA	Gears, bearings; plumbing, packaging, bottles, fabrics, textiles, ropes
Polycarbonate	PC	Safety goggles, shields, helmets; light fittings, medical components
Polyetheretherketone	PEEK	Electrical connectors, racing car parts, fiber composites
Polyethylene	PE	Packaging, bags, squeeze tubes, toys, artificial joints
Polyethylene terephthalate	PET	Blow molded bottles, film, audio/video tape, sails
Polymethyl methacrylate	PMMA	Aircraft windows, lenses, reflectors, lights, compact discs
Polyoxymethylene (Acetal)	POM	Zips, domestic and appliance parts, handles
Polypropylene	PP	Ropes, garden furniture, pipes, kettles, electrical insulation, Astroturf
Polystyrene	PS	Toys, packaging, cutlery, audio cassette/CD cases
Polyurethane Thermoplastics	tp-PU	Cushioning, seating, shoe soles, hoses, car bumpers, insulation
Polyvinylchloride	PVC	Pipes, gutters, window frames, packaging
Polytetrafluoroethylene (Teflon)	PTFE	Non-stick coatings, bearings, skis, electrical insulation, tape
Thermosets		
Epoxies	EP	Adhesives, fiber composites, electronic encapsulation
Phenolics	PHEN	Electrical plugs, sockets, cookware, handles, adhesives
Polyester	PEST	Furniture, boats, sports goods
Polymer Foams		
Flexible Polymer Foam		Packaging, buoyancy, cushioning, sponges, sleeping mats
Rigid Polymer Foam		Thermal insulation, sandwich panels, packaging, buoyancy

Ansys / GRANTA EDUPACK

Metals	Applications
Ferrous metals	
Cast Irons	Automotive parts, engine blocks, machine tool structural parts, lathe beds
High Carbon Steels	Cutting tools, springs, bearings, cranks, shafts, railway track
Medium Carbon Steels	General mechanical engineering (tools, bearings, gears, shafts, bearings)
Low Carbon Steels	Steel structures ("mild steel") – bridges, oil rigs, ships; reinforcement for concrete; automotive parts, car body panels; galvanized sheet; packaging (cans, drums)
Low Alloy Steels	Springs, tools, ball bearings, automotive parts (gears connecting rods etc)
Stainless Steels	Transport, chemical and food processing plant, nuclear plant, domestic ware (cutlery, washing machines, stoves), surgical implements, pipes, pressure vessels, liquid gas containers
Non-ferrous metals	
Aluminum alloys	
Casting alloys	Automotive parts (cylinder blocks), domestic appliances (irons)
Non-heat-treatable alloys	Electrical conductors, heat exchangers, foil, tubes, saucepans, beverage cans, lightweight ships, architectural panels
Heat-treatable alloys	Aerospace engineering, automotive bodies and panels, lightweight structures and ships
Copper alloys	Electrical conductors and wire, electronic circuit boards, heat exchangers, boilers, cookware, coinage, sculptures
Lead alloys	Roof and wall cladding, solder, X-ray shielding, battery electrodes
Magnesium alloys	Automotive castings, wheels, general lightweight castings for transport, nuclear fuel containers; principal alloying addition to aluminum alloys
Nickel alloys	Gas turbines and jet engines, thermocouples, coinage; alloying addition to austenitic stainless steels
Titanium alloys	Aircraft turbine blades; general structural aerospace applications; biomedical implants.
Zinc alloys	Die castings (automotive, domestic appliances, toys, handles); coating on galvanized steel

Natural materials	Applications
Bamboo	Building, scaffolding, paper, ropes, baskets, furniture
Cork	Corks and bungs, seals, floats, packaging, flooring
Leather	Shoes, clothing, bags, drive-belts
Wood	Construction, flooring, doors, furniture, packaging, sports goods

Composites	Applications
Aluminum/Silicon Carbide	Automotive parts, sports goods
CFRP	Lightweight structural parts (aerospace, bike frames, sports goods, boat hulls and oars, springs)
GFRP	Boat hulls, automotive parts, chemical plant

Λnsys / GRANTA EDUPACK

Ceramics	Applications
Glasses	
Borosilicate Glass	Ovenware, laboratory ware, headlights
Glass Ceramic	Cookware, lasers, telescope mirrors
Silica Glass	High performance windows, crucibles, high temperature applications
Soda-Lime Glass	Windows, bottles, tubing, light bulbs, pottery glazes
Technical	
Alumina	Cutting tools, spark plugs, microcircuit substrates, valves
Aluminum Nitride	Microcircuit substrates and heat sinks
Boron Carbide	Lightweight armor, nozzles, dies, precision tool parts
Silicon	Microcircuits, semiconductors, precision instruments, IR windows, MEMS
Silicon Carbide	High temperature equipment, abrasive polishing grits, bearings, armor
Silicon Nitride	Bearings, cutting tools, dies, engine parts
Tungsten Carbide	Cutting tools, drills, abrasives
Non-technical	
Brick	Buildings
Concrete	General civil engineering construction
Stone	Buildings, architecture, sculpture

Ansys / GRANTA EDUPACK

Table A2. Density and Price

Polymers		Density (kg/m³)	Price (US$/kg)
Elastomers	Butyl rubber (IIR)	900 - 920	3.9 - 4.5
	Ethylene vinyl acetate (EVA)	950 - 960	2.3 - 2.5
	Natural rubber	920 - 930	3.5 - 3.9
	Polychloroprene (Neoprene)	1,200 - 1,300	5.3 - 5.9
	Polyisoprene rubber	930 - 940	3.2 - 3.6
	Polyurethane	1,000 - 1,300	4.1 - 4.6
	Silicone elastomers	1,300 - 1,800	11 - 13
Thermoplastics	Acrylonitrile butadiene styrene (ABS)	1,000 - 1,200	2.4 - 2.7
	Cellulose polymers (CA)	980 - 1,300	4.1 - 4.5
	Ionomer (I)	930 - 960	3.2 - 4.2
	Polyamides (Nylons, PA)	1,100	4.1 - 4.5
	Polycarbonate (PC)	1,100 - 1,200	4.6 - 5.1
	Polyetheretherketone (PEEK)	1,300	94 - 100
	Polyethylene (PE)	940 - 960	2.1 - 2.3
	Polyethylene terephthalate (PET)	1,300 - 1,400	2.1 - 2.3
	Polymethyl methacrylate (Acrylic, PMMA)	1,200	2.7 - 3
	Polyoxymethylene (Acetal, POM)	1,400	3 - 3.3
	Polypropylene (PP)	890 - 910	2.1 - 2.4
	Polystyrene (PS)	1,000 - 1,100	2.8 - 3.5
	Polytetrafluoroethylene (Teflon, PTFE)	2,100 - 2,200	15 - 17
	Polyurethane (tpPUR)	1,100 - 1,200	4.1 - 4.6
	Polyvinylchloride (tpPVC)	1,300 - 1,600	2 - 2.2
Thermosets	Epoxies	1,100 - 1,400	2.2 - 2.5
	Phenolics	1,200 - 1,300	1.7 - 1.9
	Polyester	1,000 - 1,400	3.8 - 4.3
Foams	Flexible Polymer Foam (LD)	38 - 70	2.6 - 2.9
	Flexible Polymer Foam (MD)	70 - 120	2.8 - 3.1
	Rigid Polymer Foam (HD)	170 - 470	15 - 17
	Rigid Polymer Foam (LD)	36 - 70	15 - 17

Ansys / GRANTA EDUPACK

Metals		Density (kg/m³)	Price (US$/kg)
Ferrous metals	Cast iron, ductile (nodular)	7,100 - 7,300	0.54 - 0.6
	Cast iron, gray	7,100 - 7,300	0.45 - 0.5
	High carbon steel	7,800 - 7,900	0.52 - 0.58
	Low alloy steel	7,800 - 7,900	0.56 - 0.62
	Low carbon steel	7,800 - 7,900	0.52 - 0.58
	Medium carbon steel	7,800 - 7,900	0.52 - 0.58
	Stainless steel	7,600 - 8,100	5.9 - 6.5
Non-ferrous	Aluminum alloys	2,500 - 2,900	2.1 - 2.3
	Copper alloys	8,900	7.1 - 7.8
	Lead alloys	10,000 – 11,000	6.9 - 7.6
	Magnesium alloys	1,700 – 2,000	3.1 - 3.4
	Nickel alloys	8,800 – 9,000	17 - 19
	Silver	10,000 – 10,100	650 - 710
	Tin	7,300	23 - 25
	Titanium alloys	4,400 - 4,800	22 - 25
	Tungsten alloys	10,800 – 20,000	51 - 57
	Zinc alloys	5000 - 7000	2.4 - 2.6

Natural	Density (kg/m³)	Price (US$/kg)
Cork	120 - 240	2.7 - 13
Paper and cardboard	480 - 860	0.99 - 1.2
Wood, typical across grain	660 - 800	0.66 - 0.73
Wood, typical along grain	600 - 800	0.66 - 0.73

Composites	Density (kg/m³)	Price (US$/kg)
CFRP, epoxy matrix (isotropic)	1,500 - 1,600	37 - 42
GFRP, epoxy matrix (isotropic)	1,800 – 2,000	24 - 34

Ceramics			
Glasses	Borosilicate glass	2,200 - 2,300	4.5 - 7.5
	Silica glass	2,200	6.2 - 10
	Soda-lime glass	2,400 - 2,500	1.4 - 1.7
Technical ceramics	Alumina	3,800 - 400	18 - 27
	Aluminum nitride	3,300	100 - 170
	Silicon	2,300 - 2,400	9.1 - 15
	Silicon carbide	3,100 - 3,200	15 - 21
	Tungsten carbides	10,500 – 10,600	19 - 29
Non-technical ceramics	Brick	1,600 - 2,100	0.62 - 1.7
	Concrete	2,300 - 2,600	0.04 – 0.06
	Stone	2,000 - 2,600	0.41 - 0.62

Ansys / GRANTA EDUPACK

Table A3. Young's modulus and yield strength

Polymers		Young's modulus (GPa)	Yield strength (MPa)
Elastomers	Butyl rubber (IIR)	0.001 – 0.002	2 - 3
	Ethylene vinyl acetate (EVA)	0.01 – 0.04	12 - 18
	Natural rubber	0.0015 – 0.0025	20 - 30
	Polychloroprene (Neoprene)	0.0007 – 0.002	3.4 - 24
	Polyisoprene rubber	0.0014 – 0.004	20 - 25
	Polyurethane	0.002 – 0.030	25 - 51
	Silicone elastomers	0.005 – 0.022	2.4 - 5.5
Thermoplastics	Acrylonitrile butadiene styrene (ABS)	1.1 - 2.9	19 - 51
	Cellulose polymers (CA)	1.6 - 2	25 - 45
	Ionomer (I)	0.2 - 0.42	8.3 - 16
	Polyamides (Nylons, PA)	2.6 - 3.2	50 - 95
	Polycarbonate (PC)	2 - 2.4	59 - 70
	Polyetheretherketone (PEEK)	3.8 - 4	65 - 95
	Polyethylene (PE)	0.62 - 0.9	18 - 29
	Polyethylene terephthalate (PET)	2.8 - 4.1	57 - 62
	Polymethyl methacrylate (Acrylic, PMMA)	2.2 - 3.8	54 - 72
	Polyoxymethylene (Acetal, POM)	2.5 - 5	49 - 72
	Polypropylene (PP)	0.9 - 1.6	21 - 37
	Polystyrene (PS)	1.2 - 2.6	29 - 56
	Polytetrafluoroethylene (Teflon, PTFE)	0.4 - 0.55	15 - 25
	Polyurethane (tpPUR)	1.3 - 2.1	40 - 54
	Polyvinylchloride (tpPVC)	2.1 - 4.1	35 - 52
Thermosets	Epoxies	2.4 - 3.1	36 - 72
	Phenolics	2.8 - 4.8	28 - 50
	Polyester	2.1 - 4.4	33 - 40
Foams	Flexible Polymer Foam (LD)	0.001 – 0.003	0.02 - 0.3
	Flexible Polymer Foam (MD)	0.004 – 0.012	0.048 - 0.7
	Rigid Polymer Foam (HD)	0.2 - 0.48	0.8 - 12
	Rigid Polymer Foam (LD)	0.023 – 0.080	0.3 - 1.7

Ansys / GRANTA EDUPACK

Metals		Young's modulus (GPa)	Yield strength (MPa)
Ferrous metals	Cast iron, ductile (nodular)	170 - 180	250 - 680
	Cast iron, gray	80 - 140	140 - 420
	High carbon steel	200 - 220	400 - 1,200
	Low alloy steel	210 - 220	400 - 1,500
	Low carbon steel	200 - 220	250 - 400
	Medium carbon steel	200 - 220	310 - 900
	Stainless steel	190 - 210	170 - 100
Non-ferrous	Aluminum alloys	68 - 82	30 - 500
	Copper alloys	110 - 150	30 - 500
	Lead alloys	13 - 15	8 - 14
	Magnesium alloys	42 - 47	70 - 400
	Nickel alloys	190 - 220	70 - 1,100
	Silver	69 - 73	190 - 300
	Tin	41 - 45	7 - 15
	Titanium alloys	90 - 120	250 - 1,200
	Tungsten alloys	310 - 380	530 - 800
	Zinc alloys	68 - 95	80 - 450

Natural	Young's modulus (GPa)	Yield strength (MPa)
Cork	0.013 – 0.050	0.3 – 1.5
Paper and cardboard	3 – 8.9	15 - 34
Wood, typical across grain	0.5 - 3	2 - 6
Wood, typical along grain	6 - 20	30 - 70

Composites	Young's modulus (GPa)	Yield strength (MPa)
CFRP, epoxy matrix (isotropic)	69 - 150	550 - 1,100
GFRP, epoxy matrix (isotropic)	15 - 28	110 - 190

Ansys / GRANTA EDUPACK

Ceramics		Young's modulus (GPa)	Yield strength (MPa)
Glasses	Borosilicate glass	61 - 64	22 - 32
	Silica glass	68 - 74	45 - 160
	Soda-lime glass	68 - 72	30 - 35
Technical ceramics	Alumina	340 - 390	350 - 590
	Aluminum nitride	300 - 350	300 - 350
	Silicon	140 - 160	160 - 180
	Silicon carbide	400 - 460	400 - 610
	Tungsten carbides	630 - 700	340 - 550
Non-technical ceramics	Brick	15 - 30	5 - 14
	Concrete	15 - 25	1 - 3
	Stone	20 - 60	2 - 25

Table A4. Tensile strength and Fracture toughness

Polymers		Tensile strength (MPa)	Fracture toughness (MPa.m$^{1/2}$)
Elastomers	Butyl rubber (IIR)	5 - 10	0.07 - 0.1
	Ethylene vinyl acetate (EVA)	16 - 20	0.5 - 0.7
	Natural rubber	22 - 32	0.15 - 0.25
	Polychloroprene (Neoprene)	3.4 - 24	0.1 - 0.3
	Polyisoprene rubber	20 - 25	0.077 - 0.1
	Polyurethane	25 - 51	0.2 - 0.4
	Silicone elastomers	2.4 - 5.5	0.033 - 0.5
Thermoplastics	Acrylonitrile butadiene styrene (ABS)	28 - 55	1.2 - 4.3
	Cellulose polymers (CA)	25 - 50	1 - 2.5
	Ionomer (I)	17 - 37	1.1 - 3.4
	Polyamides (Nylons, PA)	90 - 170	2.2 - 5.6
	Polycarbonate (PC)	60 - 72	2.1 - 4.6
	Polyetheretherketone (PEEK)	70 - 100	2.7 - 4.3
	Polyethylene (PE)	21 - 45	1.4 - 1.7
	Polyethylene terephthalate (PET)	48 - 72	4.5 - 5.5
	Polymethyl methacrylate (Acrylic, PMMA)	48 - 80	0.7 - 1.6
	Polyoxymethylene (Acetal, POM)	60 - 90	1.7 - 4.2
	Polypropylene (PP)	28 - 41	3 - 4.5
	Polystyrene (PS)	36 - 57	0.7 - 1.1
	Polytetrafluoroethylene (Teflon, PTFE)	20 - 30	1.3 - 1.8
	Polyurethane (tpPUR)	31 - 62	1.8 - 5
	Polyvinylchloride (tpPVC)	41 - 65	1.5 - 5.1
Thermosets	Epoxies	45 - 90	0.4 - 2.2
	Phenolics	35 - 62	0.79 - 1.2

A11. Ways of checking and estimating data

The value of a database of material properties depends on its precision and its completeness – in short, on its quality. One way of maintaining or enhancing its quality is to subject its contents to validating procedures. The property range-checks and dimensionless correlations described below provide powerful tools for doing this. The same procedures fill a second function: that of providing estimates for missing data, essential when no direct measurements are available.

Property ranges. Each property of a given class of materials has a characteristic range. A convenient way of presenting the information is as a table in which a low (L) and a high (H) value are stored, identified by the material family and class. An example listing Young's modulus, E, is shown in Table A11, in which EL is the lower limit and EH the upper one.

All properties have characteristic ranges like these. The range becomes narrower if the classes are made more restrictive. For purposes of checking and estimation, described in a moment, it is helpful to break down the family of metals into classes of cast irons, steels, aluminum alloys, magnesium alloys, titanium alloys, copper alloys and so on. Similar subdivisions for polymers (thermoplastics, thermosets, elastomers) and for ceramics and glasses (engineering ceramics, whiteware, silicate glasses, minerals) increases resolution here also.

Table A11. Ranges of Young's modulus *E* for broad material classes

Material Class	E_L (GPa)	E_H (GPa)
All Solids	0.00001	1000
Classes of Solid		
Metals: ferrous	70	220
Metals: non-ferrous	4.6	570
Technical ceramics*	91	1000
Glasses	47	83
Polymers: thermoplastic	0.1	4.1
Polymers: thermosets	2.5	10
Polymers: elastomers	0.0005	0.1
Polymeric foams	0.00001	2
Composites: metal-matrix	81	180
Composites: polymer-matrix	2.5	240
Woods: parallel to grain	1.8	34
Woods: perpendicular to grain	0.1	18

*Technical ceramics are dense, monolithic ceramics such as SiC, Al_2O_3, ZrO_2, etc.

Correlations between material properties. Materials that are stiff have high melting points. Solids with low densities have high specific heats. Metals with high thermal conductivities have high electrical conductivities. These rules-of-thumb describe correlations between two or more material properties that can be expressed more quantitatively as limits for the values of dimensionless property groups. They take the form:

$$C_L < P_1 P_2^n < C_H \qquad \text{A1}$$

Or

$$C_L < P_1 P_2^n P_3^m < C_H \qquad \text{A2}$$

(or larger groupings) where P_1, P_2, P_3 are material properties, n and m are powers (usually -1, -1/2, +1/2 or +1), and C_L and C_H are dimensionless constants – the lower and upper limits between which the values of the property-group lies. The correlations exert tight constraints on the data, giving the "patterns" of property envelopes that appear on the material selection charts. An example is the relationship between expansion coefficient, α (units: K-1), and the melting point, T_m (units: K) or, for amorphous materials, the glass temperature T_g:

$$C_L \leq \alpha T_m \leq C_H \qquad \text{A3a}$$

$$C_L \leq \alpha T_g \leq C_H \qquad \text{A3b}$$

a correlation with the form of equation (A1). Values for the dimensionless limits C_L and C_H for this group are listed in Table A1 for a number of material classes. The values span a factor to 2 to 10 rather than the factor 10 to 100 of the property ranges. There are many such correlations. They form the basis of a hierarchical data-checking and estimating scheme (one used in preparing the charts in this book), described next.

Table A12. Limits for the group αTm and αTg for broad material classes*

Correlation* CL < αTm< CH	C_L (x 10⁻³)	C_H (x 10⁻³)
All Solids	0.1	56
Classes of Solid		
Metals: ferrous	13	27
Metals: non-ferrous	2	21
Technical ceramics*	6	24
Glasses	0.3	3
Polymers: thermoplastic	18	35
Polymers: thermosets	11	41
Polymers: elastomers	35	56
Polymeric foams	16	37
Composites: metal-matrix	10	20
Composites: polymer-matrix	0.1	10
Woods: parallel to grain	2	4
Woods: perpendicular to grain	6	17

*For amorphous solids the melting point T_m is replaced by the glass temperature T_g.

Data checking. Data checks proceed in three steps. Each datum is first associated with a material class, or, at a higher level of checking, with a sub-class. This identifies the values of the property range and correlation limits against which it will be checked. The datum is then compared with the range-limits L and H for that class and property. If it lies within the range-limits, it is accepted; if it does not, it is flagged for checking.

Why bother with such low-level stuff? Because it provides a sanity-check. The commonest error in handbooks and other compilations of material or process properties is that of a value that is expressed in the wrong units, or is, for less obvious reasons, in error by one or more orders of magnitude (slipped decimal point, for instance). Range checks catch errors of this sort. If a demonstration of this is needed, it can be found by applying them to the contents of almost any standard reference data-books; none among those we have tried has passed without errors. In the third step, each of the dimensionless groups of properties like that of Table A12 is formed in turn, and compared with the range bracketed by the limits C_L and C_H. If the value lies within its correlation limits, it is accepted; if not, it is checked. Correlation checks are more discerning than range checks and catch subtler errors, allowing the quality of data to be enhanced further.

Data estimation. The relationships have another, equally useful, function. There remain gaps in our knowledge of material properties. The fracture toughness of many materials has not yet been measured, nor has the electric breakdown potential; even moduli are not always known. The absence of a datum for a material would falsely eliminate it from a screening exercise that used that property, even though the material might be a viable candidate. This difficulty is avoided by using the correlation and range limits to estimate a value for the missing datum, adding a flag to alert the user that it is an estimate.

In estimating property values, the procedure used for checking is reversed: the dimensionless groups are used first because they are the more accurate. They can be surprisingly good. As an example, consider estimating the expansion coefficient, α, of polycarbonate from its glass temperature T_g. Inverting equation (A3b) gives the estimation rule:

$$\frac{C_L}{T_g} \leq \alpha \leq \frac{C_H}{T_g} \qquad\qquad\qquad A4$$

Inserting values of C_L and C_H from Table A12, and the value $T_g = 420$ K for a particular sample of polycarbonate gives the mean estimate

$$\bar{\alpha} = 63x10^{-3}K^{-1} \qquad\qquad\qquad A5$$

The reported value for polycarbonate is

$$\alpha = 54 - 62x10^{-3}K^{-1} \qquad\qquad\qquad A6$$

The estimate is within 9% of the mean of the measured values, perfectly adequate for screening purposes. That it is an estimate must not be forgotten, however: if thermal expansion is crucial to the design, better data or direct measurements are essential.

Only when the potential of the correlations is exhausted are the property ranges invoked. They provide a crude first-estimate of the value of the missing property, far less accurate than that of the correlations, but still useful in providing guide-values for screening.
